

WHO WE ARE

Schüßler-Plan is an owner-operated, international engineering company, with 800 employees, offices in 21 locations and 60 years' experience. We are one of the leading consultancies when it comes to complex engineering projects and provide design, consulting, project monitoring, project and construction management services.

Our fields of expertise include urban planning, construction, roads, bridges and tunnels, rail networks, airports, harbours and railway stations. We provide our clients a full range of design services from a single source: from the concept to the design through to construction and handover, whether as general contractor or client representative – we are a service provider. Our project management services include support and guidance in all development phases. Our extensive range of services includes construction management and site supervision, refurbishment and renovation as well as research and development.

Many of the projects executed by the engineers of the Schüßler-Plan Group define the cityscape, whether these be high-rise buildings or road and rail development projects. Amongst our current infrastructural projects are a number closely tied to some of Düsseldorf's more significant developments such as the Kö-Bogen and the Wehrhahn Underground Line.

Through our offices in Berlin, Düsseldorf and Frankfurt am Main and 18 further offices in Germany and abroad, we are able to provide local knowledge and can be available whenever and wherever we are needed. As a company with certified quality management systems, quality of design, innovativeness, economic efficiency and sustainability are the watchwords of our approach – sustainable long-term solutions and responsibility for the environment. **Our plan for good engineering.**
